MIGRATION & GITHUB

- Azure DevOps Repos
- GitHub Enterprise Cloud
- GitHub Actions / YAML
- History · branches · tags
- Branch rules / PR policies
- Runners · secrets · variables
- Environments / approvals
- Migration & cutover checks

INFRASTRUCTURE & CI/CD

- Azure DevOps · Jenkins · GitLab
- Terraform · Azure · OCI
- Docker · Kubernetes
- AKS · OKE · Helm
- Sonatype Nexus · registries
- Grafana · Prometheus

Professional Summary

DevOps Engineer with 5 years at Accenture, supporting enterprise CI/CD platforms across Azure, OCI and on-premise environments. Experienced with Azure DevOps, GitHub SaaS, GitHub Actions and YAML workflows, alongside Jenkins, GitLab, Terraform and Kubernetes. Focus areas include repository migration, secure CI/CD modernization, release governance and production validation.

Azure DevOps → GitHub Enterprise Cloud

Migration workstreams & individual contribution areas - confirm actual execution scope before submission.

REPOSITORIES MIGRATED	PIPELINES CONVERTED	PERSONAL OWNERSHIP
[CONFIRM COUNT]	[CONFIRM COUNT]	[CONFIRM ROLE]

- Assessment & dependency mapping - Identify source repositories, pipeline definitions, service connections, agent pools, templates, package feeds and release dependencies; define target organizations, teams and migration waves.
- Repository transfer & Git integrity - Plan Azure DevOps Repos to GitHub Enterprise Cloud migration, including complete commit history, default and feature branches, tags, refs and post-transfer consistency checks.
- Azure Pipelines to GitHub Actions - Map CI/CD triggers, stages, jobs, variables, artifacts and templates to GitHub Actions YAML workflows; account for reusable workflows, runners and deployment parity.
- Governance & access - Establish branch protection/rulesets, required status checks, pull-request reviews, CODEOWNERS, organization/team permissions and least-privilege access.
- Runners, secrets & approval controls - Align GitHub-hosted/self-hosted runners, scoped secrets, variables, environments, reviewers, required approvals and deployment gates with security requirements.
- Cutover & post-migration validation - Support dry runs, dependency remediation, change windows, rollback plans and checks for repository completeness, pipeline functionality and approved release promotion.
- Individual ownership & evidence - [Specify personal deliverables: repositories handled, workflows authored, policies or runners configured, migration test evidence, cutover duties and handover ownership.]

Complete before applying: Add verified repository/pipeline totals, the project or client, and distinguish personally performed tasks from team contributions.

Professional Experience

Cloud, DevOps & GenAI Engineer

2021 – 2026

Accenture Solutions Pvt. Ltd. · Bengaluru, India

- Enterprise CI/CD operations - Administered GitHub SaaS, GitHub Actions, Azure DevOps, Jenkins and GitLab services for a centralized platform covering 40+ business verticals.
- Infrastructure & automation - Provisioned and maintained CI/CD environments on Azure, OCI and Kubernetes, using Terraform for repeatable configurations.
- Platform reliability & security - Supported runners, Sonatype Nexus and cloud registries; used OCI Vault / Azure Key Vault, Grafana and Prometheus for secure operations and observability.
- Change & release ownership - Resolved incidents, executed approved upgrades and changes, coordinated stakeholders and performed deployment and post-change validation within SLAs.

Client Engagements

Aramco Digital

Centralized DevOps Operations | OCI primary, Azure secondary

Managed CI/CD infrastructure on VMs and AKS; supported onboarding, Terraform provisioning, monitoring, secrets and operational changes.

NEOM

OCI | Cloud-agnostic DevOps

Supported OCI-hosted build/deployment environments, Docker/Kubernetes, Helm release validation and repeatable operations runbooks.

Fisher Investments

Azure production deployment

Delivered Terraform-based infrastructure changes, release checks and Ansible-supported operational tasks under formal change control.

Brighthouse Financial

Azure production deployment

Supported resource lifecycle changes, release-window deployments, configuration checks, issue resolution and post-release verification.

Innovation & Selected Contributions

- DevSecOps compliance automation - Developed repeatable OpenSCAP scanning and reporting workflows; integrated Trivy, SonarQube and Sonatype Nexus.
- GenAI & AI-assisted engineering - Explored RAG fundamentals using Azure AI Foundry and Ollama, with GitHub Copilot, Claude Code and OpenAI Codex for research and scripting.
