PRODUCT CAPABILITY REFERENCE

Help Nivo Feature Catalog

Multi-organization IT service management, provider administration, workflows, asset operations and optional AI assistance.

HN

SERVICE MANAGEMENT / MULTI-TENANT / AI-READY

01

SERVICE DELIVERY

Tickets, SLAs & workflow

02

PROVIDER CONTROL

Organizations & licensing

03

EXTENSIBILITY

AI, PostgreSQL & deployment

Release baseline: 4.5.1 **Document date:** 21 October 2026 **Status:** Evaluation beta

Scope is based on the documented delivered build and its reported tests. It is not a production certification, independently audited code review, or a promise of all capabilities in the wider ManageEngine portfolio.

What Help Nivo provides

Help Nivo is a provider-managed, multi-tenant ITSM/MSP application. One hosting operator can onboard companies into isolated workspaces; each workspace manages its own service operations and configuration. Shared infrastructure and a central provider console underpin the customer-facing functions.

INCLUDED	NEEDS SETUP	LIMITED	NOT INCLUDED

Reading guide. “Included” means the application contains the described functionality. “Needs setup” means credentials, an external service or deployment work are required. “Limited” indicates a bounded subset of a broader enterprise capability. “Not included” means it remains a development item.

Module guide

01–03	Platform, licensing & identity
04–05	Requests, service catalog & SLA
06–07	Changes, releases, assets & procurement
08–09	Reporting, notifications & AI
10–11	Setup Center & user experience
12–14	Architecture, exclusions & readiness

Platform boundaries to understand

Identity: one user account can have separate memberships in multiple companies; Google sign-in alone does not grant membership. **Data:** customer records share a PostgreSQL deployment, with application scoping and row-level security definitions, rather than dedicated databases per company. **AI:** supported model integrations produce reviewable output; they do not autonomously perform privileged actions. **Hosting:** public customer use requires deployment, integration and security acceptance beyond installing the ZIP.

02 / Multi-organization platform

Host multiple company workspaces under one provider-controlled application.

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Organization registration	Company signup and its first owner; verified activation flow for production.	INCLUDED
Workspace isolation	Authenticated membership checks and tenant-scoped records; PostgreSQL RLS schema.	INCLUDED
Multiple memberships	One email can access several organizations through an authorized selector.	INCLUDED
Organization administration	Manage company profile, users, reference settings, supported modules and records.	INCLUDED
Platform Administration	Provider-only control of organizations, service defaults, SMTP, sign-in and AI policies.	INCLUDED
Invitations and revocation	Invite the exact account email to a company-specific role; remove inactive access.	INCLUDED
Workspace access states	Apply supported expiry, restricted, read-only or suspended access policies.	INCLUDED
Customer domains	Domain request, ownership verification and provider approval; DNS/TLS need deployment.	NEEDS SETUP
Brand prefix and icon	Keep Help Nivo as base brand; optional company prefix, app icon and browser favicon.	INCLUDED

03 / Licensing, accounts and security

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Provider plans	Set plan entitlements and enabled modules centrally.	INCLUDED
Ticket quotas	Enforce daily and monthly ticket creation allowances server-side.	INCLUDED
AI and voice allowances	Limit supported AI/voice operations by organization.	INCLUDED
Membership limits	Control allowed users and supported per-organization overrides.	INCLUDED
Admin initialization	Host-issued single-use browser bootstrap link and administrator enrollment.	INCLUDED

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Admin MFA and recovery	Password, authenticator and single-use recovery factors; host-only recovery tools.	INCLUDED
Customer email activation	Verify signup email before account/organization creation in production mode.	NEEDS SETUP
Password and account security	Argon2 hashing, reset flow, session revocation and authenticated account management.	INCLUDED
Google account sign-in	Google OIDC with controlled existing-account linking; OAuth client required.	NEEDS SETUP
Company roles	Provider admin, organization owner/admin, technician and requester boundaries.	INCLUDED
Billing engine	No payment collection, invoicing, tax calculation or automatic paid renewals.	NOT INCLUDED

04 / Tickets and incident management

Requests are the operational center of Help Nivo.

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Request creation	Incidents, service requests and general support forms with structured fields.	INCLUDED
Lifecycle actions	Assign, start, hold/resume, resolve, close, reopen and requester confirmation.	INCLUDED
Automatic closure	Organization policy can close resolved requests after a configured period.	INCLUDED
Ticket priority	Configurable priorities and supported impact/urgency matrix.	INCLUDED
Assignment	Assign to self or eligible technician; manual and routing-based dispatch.	INCLUDED
Templates	Request templates with default values and supported audience controls.	INCLUDED
Custom fields	Organization-defined fields and backend validation for supported forms.	INCLUDED
Bulk operations	Supported multi-request updates from filtered lists.	INCLUDED
Public and private discussion	Requester-visible replies and technician-only notes.	INCLUDED

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Reply templates	Reusable reply content and placeholder substitution.	INCLUDED
File attachments	Authorized uploads, restricted types and limits, encrypted supported storage.	LIMITED
Linked records and merging	Associate ticket/asset/CI/problem records; controlled duplicate merging.	INCLUDED
Worklogs	Record time, dates and billable/non-billable work.	INCLUDED
Satisfaction feedback	Capture requester ratings and feedback.	INCLUDED
Audit/history	Record operational changes, communications and decisions.	INCLUDED
Search and closed views	List, search and filter operational records and closed requests.	INCLUDED

05 / Service catalog, SLA and automation

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Service catalog	Organization-defined services and forms with configurable questions and default routing.	INCLUDED
Service approvals	Up to five sequential independent stages with rejection handling.	LIMITED
Fulfillment tasks	Create configured tasks after completed service approvals.	INCLUDED
SLA response and resolution	Set target time by configured policy/priority.	INCLUDED
Business calendar	Timezone, working days, holiday exclusions and business-hour timing.	LIMITED
Pause and escalation	Pause-on-hold, breach notifications and supported escalation destinations.	INCLUDED
Assignment rules	Ordered first-match conditions and supported actions.	INCLUDED
Round-robin dispatch	Rotate among eligible technicians in configured pools.	INCLUDED
Arbitrary automation scripts	No unrestricted low-code scripts, sandboxed scripts or custom execution engine.	NOT INCLUDED
Complex OLA calendars	No full OLA chains, split shifts and advanced timed escalation engine.	NOT INCLUDED

06 / Change, release and knowledge processes

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Change requests	Planning, owner, risk, rollback, schedule, approval and lifecycle tracking.	INCLUDED
Change workflow designer	Icon-based node graph with explicit connection fields and node inspector.	LIMITED
Workflow draft/publish	Validate definitions and publish immutable revisions; existing runs retain revision.	INCLUDED
Workflow execution	Controlled work steps and explicit approved/rejected paths with history.	INCLUDED
Independent decisions	Guard against change/release owner or initiator self-approval.	INCLUDED
Release management	Plan releases linked to changes/CIs, scheduling, validation and status history.	INCLUDED
Release prerequisites	Enforce linked-change readiness before release progression and completion.	INCLUDED
Problem management	Problem records, root-cause notes, recurring issues and workarounds.	INCLUDED
Known errors	Publish known-error information from problem records.	INCLUDED
Knowledge articles	Create, search and rate service knowledge.	INCLUDED
Advanced BPMN/CAB	No full BPMN import, parallel quorum, loop-based rework, scripts or CI/CD deployment.	NOT INCLUDED

07 / Assets, CMDB and business operations

CAPABILITY	FUNCTIONAL SCOPE	STATUS
IT asset register	Manually maintain assets, owner, site, classification, condition and lifecycle.	INCLUDED
Asset loans/returns	Track issue and return of supported asset records.	INCLUDED
Software allocations	Purchased seats, entitlements and manual license allocations.	LIMITED
CMDB	Configuration items and typed relationships with associated service records.	INCLUDED

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Impact traversal	Explore relationships to identify recorded dependencies.	INCLUDED
Supplier management	Maintain supplier records referenced in operational purchasing.	INCLUDED
Contracts	Register terms, dates, values, statuses and expiry notifications.	INCLUDED
Purchase processing	Line items, calculated totals, independent approvals and ordered/received steps.	INCLUDED
Inventory receiving	Create in-stock assets once from received purchase units.	INCLUDED
Projects and milestones	Projects, owned work items, prerequisites and completion progress.	LIMITED
Assigned tasks	Track responsibilities, deadlines, priorities and statuses.	INCLUDED
Scheduling/resources	Calendar for work, changes and releases; technician timeline/workload.	LIMITED
Automatic discovery	No device agents, network scan, OS telemetry or automated reconciliation.	NOT INCLUDED
Remote access and patching	No endpoint remote desktop, operating-system imaging or patch deployment.	NOT INCLUDED

08 / Reports, dashboards and notifications

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Personal overview	My requests/tasks, pending approvals and relevant work summaries.	INCLUDED
Operational dashboards	Ticket volume, technician workload, trends, statuses and SLA performance.	INCLUDED
Predefined reports	Operational, worklog, SLA, seat utilization, contract and satisfaction views.	INCLUDED
CSV exports	Export supported report outputs and permitted lists.	INCLUDED
Saved notification inbox	Unread count, history, linked record navigation and read-state controls.	INCLUDED
In-app pop-ups	Receive authorized ticket/activity updates without leaving the current form.	INCLUDED

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Notification preferences	Mute categories and choose personal delivery channels per membership.	INCLUDED
SMTP message queue	Queued mail, retry handling, verification, invitations and supported updates.	NEEDS SETUP
Optional desktop alerts	Browser-permission-based alerts while the application tab is open.	NEEDS SETUP
Scheduled report delivery	No comprehensive schedule-and-email report subscription engine.	NOT INCLUDED
Closed-browser push	No background Web Push subscription service.	NOT INCLUDED

09 / Artificial intelligence and voice

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Shared Ollama	Use a privately managed Ollama endpoint with platform policies.	NEEDS SETUP
Gemini / OpenAI	External model adapters; your account and credentials required.	NEEDS SETUP
Compatible model API	Supported Chat Completions-style provider integration.	NEEDS SETUP
BYO model credentials	Organization-specific protected provider settings where supported.	INCLUDED
AI usage and consent	Organization processing consent and commercial allowance checks.	INCLUDED
Ticket summaries	Produce reviewable ticket/history summaries from a connected model.	NEEDS SETUP
Reply suggestions	Suggest response text; technician reviews before posting.	NEEDS SETUP
AI-based record proposals	Prepare editable ticket/task proposals from text or transcripts.	LIMITED
Report proposals	Bounded, tenant-scoped report assistance; no arbitrary generated SQL.	LIMITED
Voice capture/transcription	Optional faster-whisper speech-to-text service.	NEEDS SETUP
Human-in-the-loop controls	Generated content is not silently submitted or auto-approved.	INCLUDED
Autonomous AI agent	No general tool-using virtual technician or autonomous approval system.	NOT INCLUDED
Semantic knowledge search	No complete retrieval-augmented semantic search and tenant vector indexing.	NOT INCLUDED

10 / Organization Setup Center

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Company and people	Profile, timezone, members, invitations and supported account administration.	INCLUDED
141 starter values	Preload standard priorities, categories, groups, site and operational list values.	INCLUDED
Add missing defaults	Add absent reference codes without overwriting tenant customizations.	INCLUDED
Reference value management	Edit organization-specific supported dropdown business values.	INCLUDED
Dropdown directory	Identify each field's source: business catalog, membership, record or system rule.	INCLUDED
Request/reply templates	Author and reuse organization templates.	INCLUDED
Custom fields	Supported form-field labels, types and validation.	INCLUDED
SLA policies and routing	Working calendars, targets, escalation and assignment configuration.	INCLUDED
Workflow designer	Create/revise/publish supported change and release process definitions.	INCLUDED
Brand and URL	App prefix/icon, favicon and customer domain request flow.	INCLUDED
Appearance preferences	Accent palettes, reading sizes, density and optional background detail.	INCLUDED
Module and AI settings	Entitled module preferences, supported AI settings and consent.	INCLUDED
Audit and exports	View supported history and export permitted data.	INCLUDED

11 / User experience and appearance

CAPABILITY	FUNCTIONAL SCOPE	STATUS
White enterprise interface	Clean header, cards, data tables, forms and navigation with restrained colored accents.	INCLUDED
Sidebar navigation	Scrollable groups, active link indication, compact icon rail and collapsed sections.	INCLUDED
Keyboard page finder	Cmd+K / Ctrl+K search across permitted pages and settings.	INCLUDED

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Responsive layout	Desktop and narrow-screen navigation patterns.	INCLUDED
Reading and density	Standard/large reading size, comfortable/compact table spacing.	INCLUDED
Branding surfaces	Provider and organization icon/favicons; organization name prefix.	INCLUDED
Notification visibility	Bell, inbox, non-blocking toast behavior and reduced-motion handling.	INCLUDED
Theme accents	Muted professional color options; pages remain predominantly white.	INCLUDED

12 / Architecture, data and deployment

CAPABILITY	FUNCTIONAL SCOPE	STATUS
PostgreSQL backend	Application data in PostgreSQL with schema migrations.	INCLUDED
Multi-tenant data controls	Application scoping, composite references and forced RLS policies.	INCLUDED
Database privileges	Separate runtime, migration/owner and read-only inspection roles.	INCLUDED
Protected data/keyring	Encryption of selected fields and private keyring management.	LIMITED
Encrypted database backup	Logical backup archive and documented separate key custody.	INCLUDED
Managed PostgreSQL	External RDS/managed DB configuration and verified TLS options.	NEEDS SETUP
Web application TLS	Trusted reverse proxy and certificate configuration for public service.	NEEDS SETUP
Domain configuration	Provider-approved hostname workflow; DNS mapping done with registrar/cloud.	NEEDS SETUP
Email delivery	Platform SMTP outbox with background worker.	NEEDS SETUP
AI/voice gateways	Separate internal model/voice interface processes with application-side access control.	INCLUDED
Operator commands	Start, stop, restart, status, administrator recovery, database and backup.	INCLUDED
Configurable web port	APP_PORT accepts available ports such as 8010 or 8003 in local .env.	INCLUDED

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Containers/deployment	Compose and AWS/VM deployment guides; live install acceptance outstanding.	NEEDS SETUP
Independent microservices	Business modules use a shared application/database, not individual deployed databases.	NOT INCLUDED

13 / Deferred and external capabilities

These are not suitable for an unqualified customer-facing “supported” claim.

CAPABILITY	FUNCTIONAL SCOPE	STATUS
Inbound email-to-ticket	No production mailbox polling/webhook ingestion pipeline.	NOT INCLUDED
Enterprise identity federation	No tenant SAML/SCIM, comprehensive Entra federation or customer-wide MFA/passkeys.	NOT INCLUDED
Remote desktop/endpoint agents	No deployed agent, discovery, remote control or patch execution.	NOT INCLUDED
Network monitoring/SIEM	No full observability platform, SIEM data pipeline or automated threat detection.	NOT INCLUDED
Customer-specific SMTP	One centrally administered outbound relay; per-tenant SMTP not provided.	NOT INCLUDED
Customer billing	No subscription charging, payment gateway or customer invoicing engine.	NOT INCLUDED
Advanced workflow engine	No drag-to-connect BPMN, parallel voting, arbitrary scripts, dynamic loops or CI/CD execution.	NOT INCLUDED
Unrestricted reports	No general SQL editor, arbitrary query builder or guaranteed scheduled delivery.	NOT INCLUDED
External key custody	No complete customer-owned KMS/HSM integration or full-field encryption.	NOT INCLUDED
HA/disaster recovery certification	No validated multi-node automatic failover architecture.	NOT INCLUDED
SOC 2 attestation	No completed independent SOC 2 examination.	NOT INCLUDED

14 / Validation and public-launch requirements

The latest release reports the following internal verification; do not treat the figures as external production acceptance.

Automated backend tests	327 passed (reported)
PostgreSQL-only tests	9 skipped
Focused port checks	21 passed (reported)
Real AWS / RDS deployment	Not verified
Live SMTP / Google / Ollama	Acceptance still required
Independent security review	Not completed

Before admitting real customer data

- Run actual PostgreSQL migration, tenant isolation/RLS, quota concurrency and realistic query-plan tests.
- Validate normal browser cookies, CSRF, TLS, custom domains, user recovery and mobile/accessibility behaviors.
- Prove SMTP activation, invitations, message deliverability, retries and bounce/complaint handling.
- Test backups and restored decryption keys, with documented recovery objectives and access controls.
- Run dependency/secret/container vulnerability scans, targeted penetration tests, and representative load tests.
- Establish incident handling, tenant data retention, legal/privacy requirements and independent compliance scope.

Source and interpretation: Compiled from the previously documented Help Nivo 4.5.1 capability overview and project release documentation. Terms such as “included” refer to delivered application features, not independently verified live deployment. Optional integrations require appropriate third-party services, configuration and testing.
